

DIMO Maint MX Analytics: **dynamic 360° analysis** of your maintenance activity

INTRODUCTION

Much more than just a dashboard, DIMO Maint MX Analytics is a key tool in your proactive management, offering you an innovative vision of your global activity. A solution that helps measure performance and facilitates decision-making, this module is an essential building block for managing your company's maintenance activity.

Unlike a real-time operational analysis of your data, DIMO Maint MX Analytics allows you to take a step back and make strategic decisions.

THE ADVANTAGES

EFFECTIVELY MANAGE YOUR MAINTENANCE ACTIVITY

- Access a dynamic dashboard of key indicators for your performance at specific times or periods of time. Directly powered by data from your DIMO Maint MX CMMS, the dashboard helps you achieve the following management objectives:
 - evaluate your performance
 - diagnose a situation
 - communicate and inform

INCREASE THE AVAILABILITY RATE OF YOUR EQUIPMENT

- Arrange the main indicators over a given period (MTTR, MTBF, number of shutdowns, duration of operation shutdowns, operation delay, etc.) and dynamically filter all these data by clicking on any site, equipment, brand, etc.

REDUCE YOUR MAINTENANCE COSTS BY ADOPTING THE MOST APPROPRIATE MAINTENANCE STRATEGY

Analyse the origin and evolution of your maintenance costs (labour, parts, subcontracting, etc.) and examine the implementation of actions whose stakes will exceed the expenses generated by their implementation. Easily identify deviations in a few clicks and control your costs by site, equipment, etc.

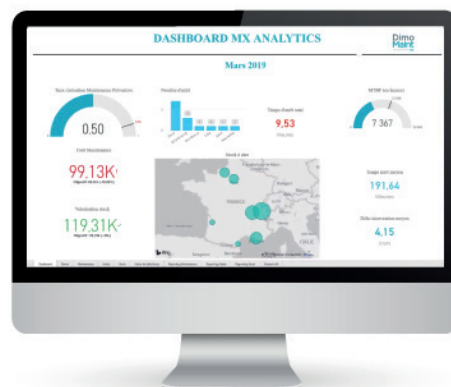

IMPROVE YOUR STOCK MANAGEMENT

- Prevent stock outs and focus your analysis on parts/items related to the most critical equipment, often out of stock or with high stock turnover. Define or modify the correct supply method based on the type of item to be purchased and its use.
- Acquire the valuation of your stocks and improve the way you manage your inventory.

EFFICIENTLY MANAGE YOUR PURCHASES (COSTS AND DEADLINES)

- Globally or specifically examine a store, delivery deadlines, delayed receipt of parts.
- Obtain the relevant analyses to discuss the corrective actions to be implemented with your suppliers.

IDENTIFY THE MAIN SOURCES OF FAILURE AND FOCUS ON THE BEST TECHNICAL SOLUTIONS

- Identify and pinpoint major failures in order to examine them so you can correct them and avoid them in the future.
- Visually identify the causes and remedies provided for these same failures.
- Evaluate the criticality to better prioritise the various failures and better implement the necessary improvements, such as preparing and following up on a preventive action plan.

REFINE YOUR ANALYSES WITH YOUR DATA ON BREAKDOWNS, STOCKS AND EXPORTABLE PURCHASES IN EXCEL

- Access the most detailed DIMO Maint CMMS maintenance, stock and purchase data, by work order.
- Modify the calculations and perform more advanced analyses by simply extracting data in Excel.
