

THE NEXT GENERATION CLOUD-BASED CMMS

A very user-friendly online solution

The online DIMO Maint MX CMMS solution enables you to take advantage of everything the Cloud has to offer: no installation required, no need to purchase licenses for each workstation, free based on-demand usage, accessibility from any mobile device with an Internet connection as well as in offline mode, regular automatic updates ensuring continuous upgrades, data security, personal data protection compliance, and interoperability with your existing information system.

THE ADVANTAGES

Manage your maintenance activity from one unique screen

You benefit from a completely customizable dashboard. Depending on your profile, you access your schedule, alarms, your shortcuts, customized indicators and you can create simplified work request directly from the home page. Navigate quickly and easily through menus and features thanks to the tabs.

Simplify your technicians work and improve reliability

Your technicians are given the possibility of quickly accessing the information they need to be efficient: quick agenda checking on the home page, fast access to work orders, alarm display, and automated reports.

Anticipate and increase operations reliability

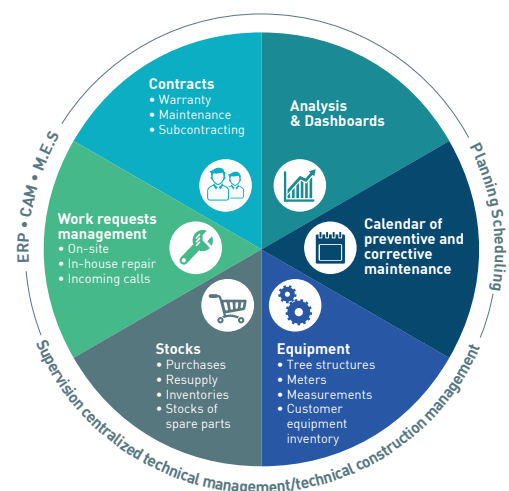

You can configure the maintenance ranges and directly manage resources. You save time and efficiency by configuring the maximum number of tasks: email sending on predefined actions.

Deploy easily project internationally

With this multi-language, multi-currency, multi-time zone solution, you eliminate all the international constraints and simplify the managing of your activity.

Evolve with no constraints

You choose a solution developed with the in Cloud/SaaS mode, extending mobility to all its users.
